V.K. Miloslavsky (Kharkov, Ukraine)  
V.V. Shinkar (Paris, France)  
V.G. Kolobrodov (Kyiv, Ukraine)  
M. V. Strikha (Kyiv, Ukraine)  
A.A. Ryzhevich (Minsk, Belarus)  
S.G. Odoulov (Kyiv, Ukraine)  
G. von Balley (Muenster, Germany)  
Ya. I. Lepikh (Odessa, Ukraine)  
L.O. Ageev (Kharkov, Ukraine)  
O.G. Ushenko (Chernivtsi, Ukraine)  
V. Khavrus (Dresden, Germany)

**ORGANIZING COMMITTEE**

L. V. Poperenko, Head of Organizing Committee, Advisor (August 2001) of SPIE Student Chapter.  
V.S. Staschuk, Professor of Optics Division of TSNUK, Advisor of OSA Student Chapter, Ukraine  
Toru Aoki, Professor of Research Institute of Electronics, Shizuoka University, Hamamatsu, Japan.  
I. A. Shaykevich, EOS Student Club Academic Mentor, Ukraine  
S.V. Kondratenko, Associate Professor of Optics Division of TSNUK, Ukraine  
O.O. Fedosenko, stipendiate of ERAZMUS MUNDUS Program 2010-2012, Germany  
M.V. Ozerov, Ph. D. Student, Rossendorf, Germany.  
M.O. Borovyj, Ph. D., Head of General Physics Division of TSNUK, Ukraine  
O.P. Polianska, President of TSNUK OSA Student Chapter and EOS Student Club, Ukraine  
D.Yu. Manko, Researcher of Institute for Information Recording, NASU, Ukraine  
V.M. Stadnytskyi, Ph.D. student, Purdue University, USA  
O.P. Oshtuk, the member of UOC, MSc student of Optics Division of TSNUK, Ukraine  
D.V. Gnatyuk, President of TSNUK SPIE Student Chapter  
M.V. Rakov, the member of UOC, MSc student of Optics Division of TSNUK, Ukraine  
Yu. Girka, the member of UOC, 3<sup>rd</sup> course student of Optics Division of TSNUK, Ukraine  
A.P. Smaliuk, the member of UOC, PhD student of Optics Division of TSNUK, Ukraine  
A.O. Maksimov, the member of UOC, Ph. D. Student of TSNUK, Ukraine  
M. Bednov, the member of UOC, vice-president of TSNUK OSA Student Chapter, Ukraine  
R. Danylo, the member of UOC, secretary of TSNUK SPIE Student Chapter, Ukraine  
A. Stazenko, 4<sup>th</sup> course student of Optics Division of TSNUK, Ukraine  
R.I. Khakimov, Ph.D. student, Aalto University School of Science and Technology, Finland  
A.G. Rozhin, Senior researcher of School of Engineering and Applied Science, Aston University, UK.  
A.O. Medvid, Prof. Dr.habil. Phys of Research Laboratory of Semiconductor Physics, RTU, Latvia  
V. Khavrus, Dr. of Institute of Solid State Research, IFW, Dresden, Germany.  
K.S. Yablochkova, Lecturer at Taras Shevchenko National University of Kyiv, Ukraine.  
Vadym Mudryi, Ph.D. student, at Taras Shevchenko National University of Kyiv, Ukraine.

---

This paper presents the results of the interactions ruby laser light - surface of glass. The investigation was conducted in order to determine the maximum energy density laser light which can be safely applied in the different optical systems. Holographic interferometry, ESPI, shearography, laser tomography and other diagnostic methods use ruby laser light. It is useful therefore to determine the maximum energy density laser light with a wavelength of  $\lambda=694.3$  nm, which does not cause damage to glass components of systems.

The ruby laser, used in the experiment, was in the TEM<sub>00</sub> mode, Q-switch. Pulse length was  $t = 30$  ns. Coherent length  $l_c = 1$  m. The output beam of light was  $\Phi = 16 \cdot 10^{-3}$  m. Output energy was  $E = 1$  J with the Gaussian distribution. Energy density  $DE = 500 \cdot 10^3$  J/m<sup>2</sup>. Glass material is utilized as target specimen.

The process of irradiation took place in atmospheric conditions. Laser light has been focused by a lens of  $f = 0.1$  m. The interaction of laser beams with materials is a complex phenomenon that depends on many factors; energy density of the laser beam, time of irradiation, or pulse length, wavelength, and distribution of energy within the beam are related to laser characteristics.

The laser-induced damage process is believed to be associated with localized formation of plasma, heating of the material leading to melting and transient stresses that instigate mechanical damage. A damage on the surface of an optical material generated using nanosecond laser sources usually appears as a crater with rough surfaces that strongly scatter the incoming laser beam. Most often cracks originating at the bottom of the damage crater are visible.

The results of laser light interactions were investigated by scanning electron microscope (SEM) with energy-dispersal unit for the analysis of X-ray (EDX) (fig.1). The results obtained by SEM and EDX analysis show that the maximum allowable energy density is around  $50 \cdot 10^3$  J/m<sup>2</sup> for ruby laser light.
