ACKNOWLEDGEMENT

The organizing committee of the 7th International Conference of Experimental and Numerical Investigations and New Technologies – CNN TECH 2023 wishes to sincerely thank all the institutions and individuals who, by means of personal engagement and constructive action, helped organise this conference.

We particularly wish to thank our sponsor, **The Ministry of Education, Government of the Republic of Serbia**.

We would like to thank the University of Belgrade - Faculty of Technology and Metallurgy for supporting the young researchers of this conference.

We are also grateful to companies, **3D Republic** and **Shimadzu**, who have significantly contributed to the organization and realization of the conference.

PREFACE

Dear Friends and Colleagues,

welcome to the CNN Tech 2023 Conference and the fabulous mountain of Zlatibor!

With 118 papers (19 by international authors) and contributions by authors from different countries, the International Conference of Experimental and Numerical Investigations and New Technologies CNN Tech 2023 successfully sets a high level for future conferences. Participation of a large number of domestic and international authors, as well as the diversity of topics, justifies our efforts to organise this conference and contribute to the exchange of knowledge, research results and experience of industry experts, research institutions and faculties which all share a common interest in the field in experimental and numerical investigations.

This year CNN Tech 2023 focuses on the following topics:

- Mechanical Engineering,
- Engineering Materials,
- Chemical and Process Engineering,
- Experimental Techniques,
- Numerical Methods,
- New Technologies,
- Clear sky,
- Dental Materials and Structures,
- Advanced Materials and Technology,
- Artificial intelligence
- Student session and
- Successful Project Stories.

For the first time, we have a new section “Successful Project Stories” dedicated to showcasing inspiring results from exceptional projects that have achieved remarkable success in their respective fields. Apart from plenty of interesting lectures, the participants will have a chance to lighten up and communicate in friendly and relaxed settings. The organising committee of CNN Tech 2023 would like to express gratitude to the Ministry of Education and the Ministry of Science, Technological Development and Innovation for the financial support of the

Conference. On behalf of the Innovation Center of the Faculty of Mechanical Engineering, Faculty of Mechanical Engineering and Center for Business Trainings, we wish this to be a splendid CNN Tech conference filled with many memorable moments.

Abstract

The utilization of biomaterials with mycelia as a stabilizing agent is gaining popularity in the fields of construction and architecture, offering a sustainable solution aligned with the principles of the circular economy. Interdisciplinary research involving biologists, technologists, and engineers is necessary to advance this field where science, art and design converge. These biomaterials contribute to energy reduction and cost-effectiveness, utilizing readily available and recyclable raw materials. Mycelium-based blocks have shown to be more affordable than traditional cement and gypsum blocks while significantly reducing CO₂ emissions. The mycelium network, formed by hyphae, can be cultivated into a solid material, providing a defined technological process. This study focusses on performing 3-point bending testing on moulded specimens using additive technology PLA material, following the ASTM D1037 standard. After the growth of mycelium and the formation of the test tube-shaped structure, the samples are dried and characterized to enhance their mechanical characteristics.

Keywords

Biomaterials, mycelia, additive technology, mold, bending test.
