Book title: Serbian Ceramic Society Conference - ADVANCED CERAMICS AND APPLICATION X Program and the Book of Abstracts

Publisher:

Serbian Ceramic Society

Editors:

Dr. Nina Obradović

Dr. Lidija Mančić

Technical Editors:

Dr. Suzana Filipović

Dr. Adriana Peleš Tadić

Dr. Jelena Živojinović

Printing:

Serbian Ceramic Society, Belgrade, 2022.

Edition:

120 copies

SRPSKO keramičko društvo. Conference Advanced Ceramics and Application : New Frontiers in Multifunctional Material Science and Processing (10 ; 2022 ; Beograd)

Program ; and the Book of abstracts / Serbian Ceramic Society Conference Advanced Ceramics and Application X New Frontiers in Multifunctional Material Science and Processing, Serbia, Belgrade, 26-27. September 2022. ; [editors Nina Obradović, Lidija Mančić]. - Belgrade : Serbian Ceramic Society, 2022 (Belgrade : Serbian Ceramic Society). - 96 str. : ilustr. ; 30 cm

Tiraž 120.

ISBN 978-86-915627-9-3

а) Керамика -- Апстракти б) Наука о материјалима -- Апстракти в) Наноматеријали -- Апстракти

COBISS.SR-ID 74827529

Conference Topics

- Basic Ceramic Science & Sintering
- Nano-, Opto- & Bio-ceramics
- Modeling & Simulation
- Glass and Electro Ceramics
- Electrochemistry & Catalysis
- Refractory, Cements & Clays
- Renewable Energy & Composites
- Amorphous & Magnetic Ceramics
- Heritage, Art & Design

Conference Programme Chairs:

Dr. Nina Obradović SRB
Dr. Lidija Mančić SRB

Conference Co-chairs:

Prof. Dr. Olivera Milošević SRB
Prof. Dr. Rainer Gadow GER

Scientific Committee

Academician Antonije Đorđević
Academician Zoran Popović
Dr. Nina Obradović
Dr. Lidija Mančić
Prof. Dr. Rainer Gadow
Prof. Dr. Marcel Van de Voorde
Prof. Dr. Wei Pan
Prof. Dr. Reuben Jin-Ru Hwu
Dr. Richard Todd
Prof. Dr. Hans Fecht
Prof. Dr. Olivera Milošević
Prof. Dr. Vladimir Pavlović
Prof. Dr. Bojan Marinković
Dr. Takashi Goto
Dr. Steven Tidrow
Dr. Snežana Pašalić
Prof. Dr. Zoran Nikolić
Dr. Nebojša Romčević
Dr. Zorica Lazarević
Dr. Aleksandra Milutinović–Nikolić
Dr. Predrag Banković
Dr. Zorica Mojović
Dr. Nataša Jović Jovičić
Prof. Dr. Branislav Vlahović
Prof. Dr. Stevo Najman
Prof. Dr. Vera Pavlović
Dr. Nataša Đorđević
Prof. Dr. Aleksandar Marinković
Dr. Sanja Stojanović
Prof. Dr. Nebojša Mitrović
Dr. Suzana Filipović
Dr. Darko Kosanović
Dr. Dušan Božanić

Organizing Committee

Dr. Nina Obradović
Dr. Lidija Mančić
Academician Antonije Đorđević
Dr. Smilja Marković
Dr. Ivana Dinić
Dr. Marina Vuković
Dr. Suzana Filipović
Dr. Anja Terzić
Dr. Milica V. Vasić
Dr. Maja Pagnacco
Dr. Dalibor Marinković
Prof. Dr. Nebojša Mitrović
Prof. Dr. Vladimir Buljak
Prof. Dr. Branislav Ranđelović
Prof. Dr. Vesna Paunović
Prof. Dr. Vera Petrović
Dr. Milica Marčeta Kaninski
Dr. Darko Kosanović

As magnesium is an important trace element in bone and teeth, and plays a key role in bone metabolism, the aim of this study was to obtain magnesium substituted hydroxyapatite (Mg-HAP) and to assess its application potential.

Upon synthesis, the changes in local structure and composition after irradiation and immersion in physiological solution and simulated fluid were followed by electron paramagnetic resonance (EPR) spectroscopy. Samples were also characterized by XRD, FTIR, SEM, EDS, AAS and TGA.

The results showed that irradiation did not affect the composition and structure of Mg-HAP. After immersion in model media, the small amount of by-product of synthesis disappeared already after 24 h and Mg-HAP remained as the only phase. Also, the radical signals in EPR spectra faded or completely disappeared after 28 days in model media, which could indicate that the structure and composition of Mg-HAP both went through a kind of stabilization in conditions mimicking physiological ones. All these indicate that investigated Mg-HAP has good potential for biomedical application considering its behaviour in model media which imitate physiological conditions.

Conversion of solar energy into hydrogen energy via the water-splitting process, assisted by photo-semiconductor catalysts, is one of the most promising technologies for the future because large quantities of hydrogen can be generated in a clean and sustainable manner. Zinc oxide (ZnO) represents one of the most investigated photocatalyst. Its ability to overcome the limitations of pristine ZnO through enhanced visible light absorption and reduced recombination of photogenerated charge carriers have gathered the attention of the many research groups. Numerous studies enabled understanding its greater activities and most studies reveal that reactive oxygen species (ROS), oxygen vacancies (O_v) and zinc interstitials (Zn_i) are responsible for the enhanced photoactivity. In fact, different factors like defect
