<sup>1</sup>The parameter  $\tau_5$  ( $\tau_5 = (\beta - \alpha)/60$ , where  $\beta$  and  $\alpha$  are the two largest angles around the central atom) is an index of the degree of trigonality, within the structural continuum between trigonal bipyramidal and square-based pyramidal geometry (Addison, A.W.; Rao, T.N.; Reedijk, J.; van Rijn, J.; Verschoor, G.C.; *J. Chem. Soc. Dalton Trans.* **1984**, 1349–1356.)

<sup>2</sup> $\rho$  (Å) is the distance of metal ion from the mean basal plane of square pyramid toward the apical ligand.

**Table S2.** Selected bond lengths (Å) and angles (°) of complexes **3** and **4**.
